

TYPO3.Flow - Bug #44049

runDql() method in Doctrine\Service handles constant incorrectly

2012-12-17 12:51 - Adrian Förder

Status:	Resolved	Start date:	2012-12-17
Priority:	Must have	Due date:	
Assignee:	Adrian Förder	% Done:	100%

Target version:	2.0	Complexity:	
PHP Version:			
Has patch:	No		

Description

The method looks like

```
public function runDql($dql, $hydrationMode = \Doctrine\ORM\Query::HYDRATE_OBJECT,
$firstResult = NULL, $maxResult = NULL) {
    ...

    return $query->execute(array(), constant($hydrationMode));
}
```

Since \$hydrationMode is obviously intended to be a constant, hence an integer, the invocation of constant(\$hydrationMode) results appropriately in Warning: constant(): Couldn't find constant 2

This never seems to happen in usual context because it's passed as a string in the Command.

[BUGFIX] Handle constant correctly in Doctrine\Service

The runDql() method in Persistence\Doctrine\Service didn't use the passed by value for the hydrationMode correctly.

Now that value is considered to be an already resolved constant as annotated and noted down in the method's signature.
