Description

Although I setup in [FE][lockIP] to store the first 2 parts of my IP address, for a IPv6 the total address is stored into the db and used to check your session.

- Status changed from New to Accepted
- Complexity set to medium

IPlock assumes an IPv4 address (it splits on '.')

Maybe we should use a common format for IPv4 and IPv6 addresses? (Some nice conversions are done in <http://stackoverflow.com/questions/12435582/php-serverremote-addr-shows-ipv6>)

This would probably be a feature and could only go in a new release.

#2 - 2014-06-27 14:26 - Job Rutgers

Still not working in Typo3 6.2

#3 - 2015-10-27 15:11 - Riccardo De Contardi

- Status changed from Accepted to Closed
- Is Regression set to No

I close this as it is a duplicate of [#21638](#), please continue the discussion there.

If you think that this is the wrong decision , then please write to the mailing list typo3.teams.bugs with issue number and an explanation or open a new ticket and add a relation to this ticket number.
