<b>Category:</b> Security	<b>Estimated time:</b> 0.00 hour
<b>Target version:</b>	
<b>Sprint:</b>	<b>Has patch:</b> No
<b>PHP Version:</b>	<b>Complexity:</b>

**Description**

File permissions for all files in **Configuration** folder and **Data/Persistent/EncryptionKey** have **644** permissions

they **should be 600**, because Apache and NGINX are for most Webserver configurations in the same group as webSPACE user. Also one stranger (f. e. by webhosting Server) can read all these files if this one can create symlinks to these files in own webSPACE.

Evidence:

- User A:
  - document root: /var/www/client1/userA
- User B:
  - document root: /var/www/client2/userB

user B makes symlinks to all Configuration/\*.yaml and to .../Data/Persistent/EncryptionKey files in its webSPACE and then call <http://users-b-domain.dev/uri-to-symlink-that-points-to-users-A-file> to read all these configuration files.

## History

### #1 - 2013-01-05 11:49 - Karsten Dambekalns

- Status changed from New to Accepted
- Assignee set to Karsten Dambekalns
- Priority changed from -- undefined -- to Must have
