[!!!][FEATURE] Support for transient nodes

Introduces a new transient node type "NodeTemplate".

Both Node and NodeTemplate implement the (simplified) interface NodeInterface.

Node additionally implement the interface PersistedNodeInterface that contains stubs related to persistence and context.

Besides this adds TypeConverters for both, persisted nodes and node templates.

This is a breaking change if you referred to NodeInterface in your code. In this case you should replace the reference with PersistentNodeInterface – unless you only invoke methods defined in the NodeInterface.
