Description			
FAL should have a recycler like we had in the past for files.			
The recycler should not be browsable by users (like the processing folder), likewise should files from the folder not be displayed to users. We might even think about completely disabling external access to these files (e.g. via <code>getPublicUrl()</code>).			
Recycled files should not be indexed in <code>sys_file</code> anymore, but the record should be serialized and stored somewhere else (like we do with <code>sys_history</code> for normal records). We cannot just simply drop the record as we might later need it again (and should then be able to restore the metadata).

Revision [ac66cdb4](#) - 2015-12-04 23:25 - Michael Oehlhof

[BUGFIX] File Recycler collect deleted files again

Check if a *recycler* folder exists along the path from the storage root to the file. If a matching folder is found move the file or folder to be deleted to the closest *recycler* folder instead of immediately removing them from the local filesystem.
