PHP Version:			
Has patch:	No		

Description

When following the steps in the documentation, an SQL error is raised when calling the Setup controller at TheDefinitiveGuide/PartII/Controller.

This is caused by the linkTitle not being allowed to be NULL.

So either the check in the setTitle() / getLinkTitle() should be changed to if (empty(\$this->linkTitle)) or the link title should be set to an empty string by default.
