Description	
Hello,	
since the last update (from today) to 4.5.24 the page doktype "External URL" is not working anymore.	
The exception which I just get in frontend is:	
<pre>#1359987599: jumpurl: Calculated juHash did not match the submitted juHash.</pre>	
It seems that you guys, are already recognized the bug: http://forum.typo3.org/index.php/t/194815/ ;)

[BUGFIX] External URL regression by jumpurl security fix

With the jumpurl security fix, pages of type 'Link to external URL' throw a jumpurl hash exception if called in the frontend. This typically happens if a HMENU renders such page links.

The patch adapts the TSFE logic to write the required hash dynamically to _GET to make the jumpurl check happy that is called later on within the same process if calling such a 'external url' link.

Sorry but this patch doesn't work in my TYPO3 4.7.9 installation.
By instance, site <http://www.gamelli.it> has an external link "Pro" (top right of nav) to <http://pro.gamelli.it>

this link throws a:

```
Uncaught TYPO3 Exception  
#1359987599: jumpurl: Calculated juHash did not match the submitted juHash. (More information)  
Exception thrown in file  
***/typo3/sysext/cms/tslib/class.tslib_fe.php in line 2699.
```

What could I try to fix this?

#12 - 2013-03-07 09:23 - Armin Vieweg

We tested the fix in 4.5.24 and it works.

#13 - 2013-03-07 12:30 - Christian Toffolo

I fixed the problem described in [#11](#) removing:
TSFE.jumpUrl_transferSession = 1

#14 - 2013-05-02 09:41 - Adrien Crivelli

Same here, the extension cbstarter contained TSFE.jumpUrl_transferSession = 1. Removing that line made the error disappear.

Thanks ian !

- *Is Regression set to No*

A fix to make it work even if TSFE.jumpUrl_transferSession = 1 is set is presented here: [#46463](#)
