<b>Category:</b>	- Documentation -	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>		<b>Complexity:</b>	no-brainer
<b>PHP Version:</b>			
<b>Has patch:</b>	No		

#### Description

On <http://docs.typo3.org/flow/TYPO3FlowDocumentation/Quickstart/Index.html>

it is clearly described how you get the composer and how you create all required packages of FLOW with it. But one important step is missing inbetween: First you have to clone the current master branch of FLOW from git with "git clone [...]".

This can be very misleading and frustrating for beginners or people who never got to know git.
