

## TYPO3.Flow - Bug #4631

### Using non-domain-objects as arguments should also work.

2009-09-15 13:33 - Sebastian Kurfuerst

<b>Has patch:</b>			

#### Description

It should be possible to have an Object bound to a form which does not have the @entity or @valueobject annotation.

Imagine a case when you have a complex form and want to bind a form-object to that - which should not be persisted in the database.

#### Associated revisions

##### Revision ad8eaa64 - 2009-09-15 13:34 - Sebastian Kurfuerst

[+FEATURE] FLOW3 (MVC): Now, non-domain-objects can be mapped inside an argument as well. Additionally, improved the exceptions in these cases. Resolves #4631
