Description With displayCond you can evaluate each form field whether it should be displayed or not. There is a number of options, but you can't define a UserFunction if the options provided by the core don't fit your needs. Usage example: 'displayCond' => 'USER:\\MyVendor\\MyExt\\UserFunction\\MyClass->displayCondition'

We have a mostly similar issue that has some more input in it.
We'll continue there.
The request is not forgotten.
