Description			
I could not find the right project to add this bug :-(After upgrading to TYPO3 CMS 6.0 (using FAL) the configuration "tt_content.image.20.renderMethod = table" does not work any more; The text is rendered but no images are rendered. I use this configuration to change the rendering in my newsletter setup where tables is required. It worked perfectly in TYPO3 CMS up to 4.7

[BUGFIX] Fix image rendering for renderMethod = table

Since the introduction of FAL to TYPO3, the rendering of images using CSS styled content with renderMethod = table is broken.

Using a single image results in the image being rendered twice and if you have multiple images in one content object, only the last image is rendered multiple times (depending on the amount of images in the content object).

This patch resolves both issues and loads the current image file reference to the contentObjectRenderer while looping through the images of the content object.

Resolves: #46864

History

#1 - 2013-04-25 15:28 - Patrick Broens

- Status changed from New to Needs Feedback

css_styled_content rendermethod table is from TYPO3 CMS versions below 4.7. Since 4.7 a lot has changed and this render method does not exist anymore in the current TypoScript from css_styled_content. The render method is still supported, but you need to use the TypoScript from an older css_styled_content/typo3 version.

#2 - 2013-06-06 17:18 - Torben Hansen

Under some circumstances you must have the possibility to render images in tables (e.g. when creating newsletters, which must be compatible with a lot of e-mail clients). The only way to get tables for the images in TYPO3 v6+ is to use "CSS Styled Content TYPO3 v4.7" for the newsletter template.

Actually it seems that this rendering method is only half supported in TYPO3 v6+ css_styled_content, since actually a table structure is rendered to the output, just the images are missing.

- Status changed from Needs Feedback to New

#4 - 2014-12-09 19:23 - Torben Hansen

This problem still exists in TYPO3 6.2 and the approach using CSS styled content v4.7 does only work, if you enable [FE][activateContentAdapter] in TYPO3 install tool. The TYPO3 Install tool shows a warning, that using [FE][activateContentAdapter] is slow.

I'll try to create a patch for this bug, which also should resolve [#46864](#)
