<b>Description</b> the system roles, Everybody and Anonymous, get a namespace and become, for example, TYPO3.TYPO3CR:Everybody in the ACLs section. This can easily be seen when calling <code>./flow configuration:show --type Policy</code> on a Neos project. I'll provide a patch (suggestion).

[BUGFIX] System roles don't get a package namespace

The role change l39f335baa01f9e9b883e98e85cb1f063bbaf5744 introduced the automatic prepend of the package namespace where the role has been defined; except for system roles which are at the moment Anonymous and Everybody.

For ACLs, however, the package namespace has been prepended also for the system roles. This fixes that behavior.
