

TYPO3.Flow - Bug #47309

Calling this in static context in cached classes

2013-04-17 11:22 - Wouter Wolters

| Description | | | |
| When updating TYPO3 Flow 2.0 to the newest commit there is an Fatal error calling \$this in static context. For example the function "static public function getActionMethodParameters" is calling \$this inside it's function. | | | |
| After bisecting with git I found out that the problem is in 6d56d5f7 | | | |
| Running on the commit before this merge TYPO3 Flow is working. | | | |

Can't reproduce that with a fresh checkout from master and I also find no problematic code in that changeset on the first look. Could it be some commit merge problem? Can you possibly provide more debug information? For example a paste of the compiled proxy for TYPO3_Flow_Mvc_Controller_ActionController in your Data\Temporary\{Context}\Cache\Code\Flow_Object_Classes folder, the system log and the exact error message.

#2 - 2013-04-18 07:17 - Steffen Ritter

Hey Wouter,
had that too - and this is because you use AOP with an advice catching all methods in a class. College of mine did an "afterThrowing" to .*Controller->.*()

This wraps AOP Code around EVERY method within the controller - even static functions which won't work.

Why this "suddenly" happened is because of the introduced compile static performance optimisation which introduced static methods.

#3 - 2013-04-23 14:08 - Benno Weinzierl

Is just stubled across the same problem. Be aware that also Policies are enforced through AOP wich make rules like this impossible:

```
'method(S2\Shop\Frontend\Controller\CheckoutController->.*(.*))'
```

i used

```
'method(S2\Shop\Frontend\Controller\CheckoutController->.*Action(.*))'
```

instead

#4 - 2013-04-25 09:36 - Robert Lemke

- Status changed from New to Closed

- Target version set to 2.0
