[BUGFIX] TCA load regression in eid context

TCA refactoring in 6.1 misses an edge case:
Frontend index_ts loads TCA after eid is handled, so there is
no TCA loaded in eid context. Eid scripts that still need
TCA should call EidUtility::initTCA(), but some call instead
TSFE->includeTCA(). But includeTCA() is empty now and deprecated.

The patch adds a call to includeTCA() to load TCA, if
GLOBAL['TCA'] array is empty. This makes sure populating TCA
is done only once.

text:caretaker_instance is affected by this, eg. test "Check
backend user accounts" needs TCA and fails without the patch.
