#### Description

When a magic image is created in the RTE with FAL, some "data-\*" attributes are added to reference the original file. Example:

```

```

According to Stanislas Rolland, this is used for updating the magic image in the RTE and for the click-enlarge feature in the frontend.

The magic image migration wizard should add these attributes too.

##### Revision a51b9691 - 2013-07-13 20:32 - Francois Suter

[BUGIFX] RTEmagic upgrade wizard: missing attributes

When the RTE creates a magic images it uses data-\* attributes to keep a reference to the original FAL record. The upgrade wizard migrates the images, creates the sys\_file entries but does not add the data-\* attributes.

Resolves: #49733

Releases: 6.1, 6.2

Patch set 2 for branch **master** has been pushed to the review server.  
It is available at <https://review.typo3.org/22019>

#### #3 - 2013-07-07 14:27 - Francois Suter

You don't need to have a full TYPO3 installation to upgrade to test this patch. Here are some steps for testing (after having applied the patch):

- 1) pick some RTE magic image file in your uploads folder or add one if you have none. It should be named something like "uploads/RTEmagicC\_foobar.jpg.jpg"
- 2) edit some tt\_content element directly in a database tool and insert something like:

```

```

in the "bodytext" field.

- 3) update the sys\_refindex index
- 4) go to the upgrade wizard, the Magic image update wizard should tell you that there's 1 link (at least) to update
- 5) run the Magic image update wizard. It should show the update queries.
- 6) check the content of the tt\_content element in the database. The img tag should have been transformed to:

```

```

#### #4 - 2013-07-13 20:32 - Gerrit Code Review

Patch set 1 for branch **TYPO3\_6-1** has been pushed to the review server.  
It is available at <https://review.typo3.org/22285>
