

Google Maps API Extbase - Suggestion #49865

Add plugin to the wizard for new content elements

2013-07-10 16:54 - Mathias Brodala

Description

Instead of inserting a general plugin and then selecting the go_maps_ext plugin, this extension should add itself to the wizard for new content elements.

This can be easily achieved using PageTS like so:

```
mod.wizards.newContentElement.wizardItems.plugins.elements.tx_gomapsext_show {
    icon = ../typo3conf/ext/Resources/Public/Icons/plugin_show.png
    title = LLL:EXT:go_maps_ext/Resources/Private/Language/locallang_db.xml:plugin.title
    description = LLL:EXT:go_maps_ext/Resources/Private/Language/locallang_db.xml:plugin.description
    tt_content_defValues {
        CType = list
        list_type = gomapsext_show
    }
}
```
