Target version:	1.0 beta 1	Spent time:	0.00 hour
Description			
As planned we need a concept for folder node types. These should be used to store other nodes and are hierarchical just like other nodes. However they do not have a presentation in the frontend, so they should not extend the document node. This split does however mean that we need to make sure that documents can be changed into folders as vice versa, regardless of this separation.
