Description

Given a file has a description and an alternative set in the filelist-module it gets merged with the override-values in the reference. this is not the case when the keyword "current" is used.

E.g.:

```
altText.data = file:current:description
```

does not work

```
altText.data = file:{file:current:originalUid}:description  
altText.data.insertData = 1
```

does work

Full TS-sample:

```
lib.aNewCe.renderImage = FILES  
lib.aNewCe.renderImage {  
  references {  
    table = tt_content  
    uid.data = field:contentUid  
    fieldName = image  
  }  
  renderObj = COA  
  renderObj {  
    10 = IMAGE  
    10 {  
      file {  
        import.data = file:current:originalUid  
      }  
      altText.data = file:current:description  
    }  
  }  
}
```

I can't reproduce this issue on master.

Test results:

```
altText.data = file:current:description
```

Displays the description of the file reference

```
altText.data = file:{file:current:originalUid}:description  
altText.data.insertData = 1
```

Displays the description of the original file

The output seems to be correct
