TYPO3.Flow - Bug #50909

Dependency injection for imported namespaces fails for abstract classes

2013-08-08 11:33 - Philipp Maier

Status:	Resolved		**Start date:**	2013-08-08
Priority:	Should have		**Due date:**	
Assignee:	Bastian Waidelich		**% Done:**	100%
Category:	Reflection		**Estimated time:**	0.00 hour
Target version:				
PHP Version:			**Complexity:**	
Has patch:	No			

Description

Within abstract classes, the @var annotation still must be fully qualified.

Working:

```
abstract class SomeClass {

        ...

    /**
     * @var \TYPO3\Flow\Security\Context
     * @Flow\Inject
     */
    protected $securityContext;
```

Not working:

```
use TYPO3\Flow\Security\Context;

abstract class SomeClass {

        ...

    /**
     * @var Context
     * @Flow\Inject
     */
    protected $securityContext;
```

Revision 751b4b55 - 2013-09-19 12:48 - Bastian Waidelich

[BUGFIX] Fix resolving of relative namespaces in parent classes

With l28fd7c7993ea79714cc62032fcc332ac8cf9d4bc the ReflectionService
resolves relative and aliased namespaces automatically.
This doesn't work for inherited classes though because the code only
considered the current class, not it's parents.

With this change code like this will work::

```
use TYPO3\Flow\Security\Context;

class SomeParentClass {
```

```
/**
```

- @var Context
- @Flow\Inject

```
*/
protected $securityContext;
```

```
// ...
    }
```

```
class SomeChildClass extends SomeParentClass {
    }
```

Revision ca5dd2ca - 2014-03-18 13:11 - Bastian Waidelich

[BUGFIX] Fix resolving of imported collection types

This change extends the ReflectionService so that it is able to
expand our custom notation for collection types::

```
CollectionType&lt;ElementType&gt;
```

Background:

In the Coding Guidelines we encourage developers to import namespaces
in order to increase readability.

With #46008 the ReflectionService is able to resolve relative and
imported namespace (with #50909 this also works for abstract classes).

But this does not work for our custom notation of Collection types yet.
With this fix relative and imported class names are supported also for
our custom notation of collection types and the above would be
expanded to::

```
\CollectionTypeNamespace\CollectionType<\ElementTypeNamespace\ElementType>
```

- Status changed from Accepted to Needs Feedback

Philipp, I can't reproduce this..
I have:

```php
<?php
namespace Some\Package;

use TYPO3\Flow\Annotations as Flow;
use TYPO3\Flow\Security\Context;

abstract class SomeAbstractClass {

    /**
     * @var Context
     * @Flow\Inject
     */
    protected $securityContext;

    /**
     * @return Context
     */
    public function getSecurityContext() {
        return $this->securityContext;
    }

}
?>
```

and

```php
<?php
namespace Some\Package;

use TYPO3\Flow\Annotations as Flow;
use TYPO3\Flow\Security\Context;

class SomeClass extends SomeAbstractClass {

}
?>
```

and everything works as expected..!?

- Status changed from Needs Feedback to Accepted

Nevermind, I can reproduce it now

#4 - 2013-08-26 11:03 - Bastian Waidelich

FYI: I'm on it but this is harder than I thought..
