Description	
Is there a reason why the title of filemounts (sys_filemounts.title) can only be 30 characters long? If not it would be cool if we could increase the field size.

History

#1 - 2013-08-25 14:07 - Ernesto Baschny

- Category set to File Abstraction Layer (FAL)

- Status changed from New to Needs Feedback

- Target version deleted (6.2.0)

Basically the reason is that a longer name would probably explode the space we have in the filelist tree in the File module. Do you have any particular reason for such a long name?

#2 - 2013-11-24 12:51 - Markus Klein

Is this still an issue? Or is Ernesto's answer sufficient?

#3 - 2013-11-24 19:27 - Alexander Stehlik

Sorry for the late reply.

I think the answer makes perfect sense. Thank you :)

When I need longer names I can use an Extension so no core modification is needed. The issue can be closed.

Cheers,
Alex

#4 - 2013-11-24 21:48 - Ernesto Baschny

- Status changed from Needs Feedback to Rejected
- Priority changed from Could have to Won't have this time

closed, thanks for the feedback!

#5 - 2013-12-27 22:26 - Lorenz Ulrich

I have a particular reason for such a long name.

In a bigger website you might have a rather complex folder structure. If a poweruser has access to a lot of filemounts, he might end up with a list like:

```
mountA
mountB
[...]
mountY
mountZ
```

So it would make sense to display part of the hierarchy to give the poweruser an impression which part the mount name belongs to:

```
departmentA/instituteA/mountA
departmentA/instituteA/mountB
departmentB/instituteA/mountC
etc.
```

Therefore longer names are needed.

I don't think the length in the file module is a real argument. It can be resized by the editor if the title is too long. I just think at the time it was created, no one needed longer titles than 30 chars. But I think it wouldn't hurt anyone to make the field longer.

What do you think?
