Description			
During some install tool actions extension configurations are included. There can occur a fatal error which should be caught and open a new tool action to check for incompatible extensions.

[FEATURE] Capture PHP errors in install tool

Some parts of the install tool can throw fatal PHP errors if broken extensions are loaded. Currently the database analyzer and the upgrade wizards are affected by this.

The patch implements a shutdown function that is called even if a fatal error is thrown and redirects to a special action that renders the "Check for broken extensions".
