Description			
In UserTScnfig a wide set of file and folder permissions can be set. The according fields for backend users and groups should be adjusted to support all possible combinations.

Revision 60511e27 - 2013-10-13 23:12 - Nicole Cordes

[FEATURE] Split file permission for be_users and be_groups

Since TYPO3 6.0 you can set specific file and folder permissions by userTScnfig. This patch adds a new field for every table to be able to set detailed access in the backend record. Any userTScnfig will take privilege over user and group data. An update step converts the old binary values to string list.

Deprecated functions to support the binary values of the old fields are removed completely. Unit tests were adapted.
