Description

In our project the PDF files where not sent properly to the requesting client and contained the following bytes in the beginning of the file:

```
2020 2020 2020 2020 2020 2020 2020 2020  
0d0a 2020 2020 2020 2020 2020 2020
```

As you can see there are some spaces, a line break and a bit more spaces.

This may not be the fault of this extension but it can bypass such issues by calling `ob_end_clean()` before attempting `readfile()`. This ensures that absolutely no additional content is sent to the client before.
