

TYPO3 Core - Bug #53640

js validation for datetime + required doesn't work for below 1970

2013-11-14 14:17 - Georg Ringer

Description

If an input field got as eval "datetime,required", the validation fails as soon as the given date is below 1970.

if the required is removed, everything is fine.

As an example: use ext:news and the datetime field.

```
'datetime' => array(
    'exclude' => 0,
    'l10n_mode' => 'mergeIfNotBlank',
    'label' => $l1 . 'tx_news_domain_model_news.datetime',
    'config' => array(
        'type' => 'input',
        'size' => 12,
        'max' => 20,
        'eval' => 'datetime',
        'default' => mktime(date('H'), date('i'), 0, date('m'), date('d'), date('Y'))
    )
),
```

tested in master but should be testable in any supported branch

Where should I put this code?

#2 - 2013-11-23 18:13 - Georg Ringer

in the TCA or just check out ext news

#3 - 2015-01-09 04:45 - Mathias Schreiber

- Status changed from New to Closed

will continue in [#37244](#), this thing is WIP (finally) :)
