

TYPO3.Fluid - Task #54195

Rename and move FormViewHelper's errorClass value, currently 'f3-form-error'

2013-12-04 13:08 - Adrian Förder

Status:	New	Start date:	2013-12-04
Priority:	Should have	Due date:	
Assignee:	Adrian Förder	% Done:	0%
Category:	ViewHelpers	Estimated time:	0.00 hour
Target version:			
Has patch:	No		

Description

This should be renamed to flow-form-error IMO, and the

```
$this->registerArgument('errorClass', 'string', 'CSS class to set if there are errors for this view helper', FALSE, 'f3-form-error');
```

is currently spread manually in every concrete ViewHelper's initializeArguments method, better place would be \TYPO3\Fluid\ViewHelpers\Form\AbstractFormFieldViewHelper IMO
