**TYPO3 Core - Bug #54371**

**Property "value" of cObject TEXT misses stdWrap**

**Description**

Hello guys,

http://docs.typo3.org/typo3cms/TyposcriptReference/ContentObjects/Text/Index.html

There are no stdWrap-Properties in TEXT-cObject on property value:

```php
public function render($conf = array()) {
    $content = ''; 
    if (is_array($conf) && isset($conf['value'])) {
        $content = $conf['value'];
        unset($conf['value']);
    }
    if (count($conf)) {
        $content = $this->cObj->stdWrap($content, $conf);
    }
    return $content;
}
```

Stefan

[BUGFIX] Add stdWrap on value property of TEXT

As discussed back in 2010, the value property of the TEXT content object should have stdWrap functionality as well, if the HTML content object is deprecated.

Today the 6.0 TSref already mentions stdWrap for value and the HTML cObject has been removed with 6.0 as well.

This fix now finally adds the stdWrap.

Resolves: #54371
Releases: 6.2, 6.1, 6.0

This is in fact not a mistake in the documentation, but a bug in the system. Before \#24063 stdWrap was present also for .value and the aim of issue 24063 was not to remove stdWrap, but to "optimize usage", meaning to optimize the number of calls to the stdWrap function(s). Actually, this and all the other associated issues even did the opposite of removing: They added stdWrap to almost every place. The question whether stdWrap shouldn't then also be present for .value, has also been discussed at that time already and as far as I see the result was that the stdWrap should not be missing for .value. Only has this bug not been fixed yet. Accordingly I'll move this issue to the Core bugtracker for further treatment.

The fix should be fairly simple: In frontend/Classes/ContentObject/TextContentObject.php, before the stdWrap for $conf, add lines like this

```php
if (isset($conf['value.'])) {
    $content = $this->cObj->stdWrap($content, $conf['value.']);
}
```

From reading the code, I doubt, that .value never head stdWrap capabilities.

```
10 = TEXT
10.value.field = header
```
was never possible and I really ask myself if we need to support that.

The question whether stdWrap shouldn't then also be present for .value, has also been discussed at that time already and as far as I see the result was that the stdWrap should not be missing for .value.

Well, yes. I has been stated that "It makes little sense" but there was agreement to do so and deprecate the HTML element at the same time (which happened indeed).

So fine for this "weird" construct, fix is easy enough.
