

TYPO3.Flow - Bug #56107

Property mapping configuration only supports one wildcard at a time

2014-02-19 10:33 - Bastian Waidelich

PHP Version:	
Has patch: No	

Description

The PropertyMapper supports wildcards (introduced with [#37436](#)) in the form:

```
$propertyMappingConfiguration->forProperty('items.*')->allowAllProperties();
```

Unfortunately this only works for **one** placeholder at a time. The following will never apply:

```
$propertyMappingConfiguration->forProperty('items.*.addons.*')->allowAllProperties();
```

The only work-around I can think of is:

```
$someArgument = $this->request->getArgument('object');
$numberOfItems = isset($someArgument['items']) ? count($someArgument['items']) : 0;
for ($itemIndex = 0; $itemIndex < $numberOfItems; $itemIndex++) {
    $propertyMappingConfiguration->forProperty('items.' . $itemIndex . '.addons.*')->
allowAllProperties();
}
```
