| <b>Status:</b> New   | <b>Start date:</b> 2014-02-24    |
| <b>Priority:</b> Should have   | <b>Due date:</b>                 |
| <b>Assignee:</b>   | <b>% Done:</b> 0%                |
| <b>Category:</b>   | <b>Estimated time:</b> 0.00 hour |
| <b>Target version:</b>   |                                  |
| <b>Has patch:</b> No   |                                  |
| <b>Description</b><br>constructions like these,<br><pre>{f:if(condition: anEntity, then: '{anEntity -&gt; f:format.identifier()}'')}</pre><br>make the then-branch be evaluated, i.e. invoked, even if the condition evals to false. In most cases this is the exact thing which is intended to be circumvented when wrapping a ViewHelper invocation in a f:if condition. |                                  |
