

TYPO3.Fluid - Task #5636

Task # 26664 (New): Clean up Form ViewHelpers

Task # 26658 (New): Make Form ViewHelpers consistent

Form_RadioViewHelper and CheckBoxViewHelper miss check for existing object before it is accessed.

2009-12-05 18:13 - Steffen Ritter

Status: Under Review	Start date: 2009-12-05

Has patch: No	
Description If you have an form for creating an Object currently this will fail with an exception. The other FormViewHelper use the getValue() function to determine an property-value of object assigned to the form. Since Checkbox/Radiobox has to compare against a value to decide if selected, they have to fetch the property-value on their own. in getValue a check on <code>\$this->viewHelperVariableContainer->exists('Tx_Fluid_ViewHelpers_FormViewHelper', 'formObject')</code> and an call to <code>\$this->addAdditionalIdentityPropertiesIfNeeded()</code> ; are performed before accessing the property. If you do so in RadioBox and CheckBox too, no exception anymore. regards Steffen

I can confirm this bug. The patch works fine for me. Thanks Steffen!

regards
Pascal

#2 - 2010-01-25 17:50 - Thomas Deinhamer

I got a similar problem when trying to display a field of TCA-type 'select' with items defined in the TCA.

The values of the field will get stored as CSV list in the backend, so the type of the property in Extbase is 'string'.

The problem is, that the checkbox viewhelper isn't aware of handling this CSV list. If I enhance my model to return an array, the whole thing will screw up when the model gets persisted, as the SQL generated is something like: "UPDATE table SET csv_field=()"

This happens if the field comes from a form, where no checkboxes where selected.

Sorry for the sloppy description, but I'm not really aware of where Extbase/Fluid messes this up or transforms the variables into other types, etc. It's just I got huge problems setting/getting 'select' fields (as defined in TCA) inside my model, for displaying them with Fluid and persisting them after form submission.

#3 - 2010-06-18 15:11 - Sebastian Kurfuerst

- Project changed from 534 to TYPO3.Fluid

#4 - 2011-02-03 18:27 - Peter Niederlag

- File `radioProperty-5636.diff` added

IMO, the Fix by Steffen won't work on recent(>1.3.0) fluid versions. The issue needs to be tackled properly anyway as in [#9214](#). attached patch at least fixes the exception.

#5 - 2011-02-03 18:30 - Peter Niederlag

- File `radioProperty-5636.diff` added

updated patch.
Remove

```
$this->addAdditionalIdentityPropertiesIfNeeded();
```

from patch as it sneaked in there by accident

Patch set 3 of change `le8a02e019d67e8b7a3a01544e8a643dfaa507db0` has been pushed to the review server. It is available at <http://review.typo3.org/4413>

#10 - 2011-09-09 15:20 - Robert Lemke

- Target version changed from `1.0 beta 2` to `1.0.0`

#11 - 2011-10-20 01:48 - Karsten Dambekalns

- Target version deleted (`1.0.0`)

#12 - 2012-02-08 10:53 - Gerrit Code Review

- Status changed from `New` to `Under Review`

Patch set 4 for branch `master` has been pushed to the review server. It is available at <http://review.typo3.org/4413>

#13 - 2012-03-12 14:36 - Christian Müller

- Has patch set to `No`

maybe this ticket should be moved to the MVC project or closed?

#14 - 2012-08-07 13:23 - Michael Bakonyi

Is there any news about this issue? Unfortunately in 4.7.2 this problem still exists which might extbase/fluid show up like it was still in beta-state to extension-developers. Is it possible to sponsor parts of the fixing of this bug respectively integrating the offered patches into core?

#15 - 2012-10-15 14:33 - Daniel Siepmann

Using the rewritten property Mapper, adding the following three lines of code to the view helper helped me:

```
if ($this->configurationManager->isFeatureEnabled('rewrittenPropertyMapper') && $this->hasMappingErrorOccured()) {
```

```
$propertyValue = (boolean)$this->getLastSubmittedFormData();  
}
```

I added them right after assigning the line:

```
$propertyValue = $this->getPropertyValue();
```

I don't know whether this will work in all other situations.

Basically it does the same as all other fluid form fields like textfield.
It retrieves the content of the property in the current request.

Perhaps this will help some of you.

#16 - 2013-02-08 20:29 - Gerrit Code Review

Patch set 5 for branch **master** has been pushed to the review server.
It is available at <https://review.typo3.org/4413>
