Description

In few tests dataproviders have duplicated array keys, which results in some cases not being tested.
e.g. in the `canGenerateForParametersDataprovider()` method of the `CacheHashCalculatorTest`
'Only the relevant parts should be taken into account' => `array('&key=value&exclude1=val', $knowHash),`
'Only the relevant parts should be taken into account' => `array('&exclude2=val&key=value', $knowHash),`

[TASK] Fix duplicated array keys in tests

In few tests dataproviders have duplicated array keys, which results in some cases not being tested.
This patch removes duplicated entries and changes array key names where needed.

Resolves: #57180

Releases: 6.2
