

TYPO3 Core - Bug #57365

Page cache information displayed also displayed for json typeNum pages, if [FE][debug] is set

Description	
Hi,	
I just noticed that if you have <code>TYPO3_GLOBAL_VARS['FE']['debug']</code> set you always get the page cache generation displayed at the end via HTML comment.	
However, if I build a json array via that <code>typeNum</code> that creates troubles.	
Maybe it would be better to prefer the <code>page.config.debug</code> setting, if it is set (so I can overwrite it in the <code>typeNum</code> page - maybe only if <code>typeNum > 0</code>) or create a different setting to disable it.

Revision `cdf723e2` - 2014-03-30 17:45 - Georg Ringer

[BUGFIX] Respect `config.debug` setting for displaying `parsetime`

2 possible information snippets can be outputted using `config.debug = 1` in `TypoScript` or `[FE][debug]=1` in `Install Tool`.

- `Parsetime`
- `Cached page generated time + expire date`

`TypoScript` should override the general setting of the `Install Tool` to make it possible to turn debugging of for specific `PAGE` objects.

This is especially needed if using e.g `JSON` output is invalid having this information.

The change uses the same check as in `index_ts` where it works perfectly fine.

Imho [#57202](#) already solved this? Allows you to override LocalConfiguration using config.debug.
