Description Admin BE users are processing defined db mounts, which leads to an unnecessary big page tree because of the selected db mounts displayed in addition to the default root(uid 0).	
How to reproduce <ol style="list-style-type: none">1. Create a backend user without setting the admin flag and set a db mount.2. Edit the newly created user and set the admin flag. The db mount fields disappear, but are still taken into account. <p>Appears in 4.5 and 6.2 (didn't tested other versions).</p>

[BUGFIX] Admin users should ignore user mounts

Admin user records still process earlier defined mounts which leads to a cluttered page tree or filelist tree, respectively.

Resolves: #57587

Releases: 6.2

How to reproduce

1. Create a backend user without setting the admin flag and set a db mount.
2. Edit the newly created user and set the admin flag. The db mount fields disappear, but are still taken into account.

A more usual case:

1. Create a backend user group, set a DB mount.
2. Create an admin backend user
3. Assign the backend user group to the admin backend user.

The third step is required to have pages created by this user owned by the user group and thus editable by all regular users of this group. (Unless you use PageTS)
