Description
Currently TCA changes of the category API are applied on every request **after** the extTables files is included. This makes it impossible to override the changes by third party extensions and also we do not benefit from Caching. Instead we use the introduced signal and apply the changes right before caching. With this change we have a clear separation of registering category field additions (in ext_localconf.php) and applying the TCA changes while building the TCA cache.

[BUGFIX] Make category TCA changes cacheable

Currently TCA changes of the category API are applied on every request
after the extTables files is included. This makes it impossible to
override the changes by third party extensions and also we do not
benefit from caching.

Instead we now use the introduced signal and apply the changes
right before caching.

With this change we also have a clear separation of
registering category field additions (in ext_localconf.php) and
applying the TCA changes while building the TCA cache.
