[BUGFIX] Invalid localization overlay of cObject FILES

The TypoScript cObject FILES does not consider localization overlays and behavior correctly when it comes additional translation table (e.g. for pages).

Concerning pages_language_overlay.media, there is no default fallback to the values of the default language. This behavior is the same to TYPO3 4.5. If the localization shall fallback to the default language, the "mergelfNotBlank" property needs to be used for the accordant field.

For having the localization handling working properly the FILES cObject section "references" must not set the properties "table" and "uid" - otherwise the values will just be overridden by those TypoScript settings.

How to test the patch:

Requirements:

- open typo3conf/extTables.php and put
\$GLOBALS['TCA']['pages_language_overlay']['columns']['media']['l10n_mode'] = 'mergelfNotBlank';
- clear TCA caches (e.g. "clear all" in Install Tool)
- create translation of a page, without translating the media field (on the resources tab)
- have some TypoScript to out the file or the name of the file, e.g.
@page = PAGE
page.10 = FILES

```
1. page.10.references = ...  
   page.10.renderObj = TEXT  
   page.10.renderObj.data = file:current:publicUrl  
   page.10.renderObj.wrap = |,
```

Tests:

1) TypoScript using the special "fieldName" property
page.10.references.fieldName = media

2) TypoScript using stdWrap
page.10.references.field = media

#3 - 2014-05-03 18:37 - Frans Saris

@Olly:

This doesn't work:

```
page.10.references.field = media
```

In handleFileReferences() you explicit look for fieldName or else there is a early return.
