

TYPO3 Core - Bug #58699

IPv6 completely ignored by FE/BE lockIP

Description	
<p>I got the privacy extensions enabled on my system, which causes the IPv6 to change quite frequently. But the ['BE']['lockIP'] setting is useless for IPv6. So Typo3 throws me out of the backend if the IP changes.</p> <p>I would propose to add an additional config value only for IPv6 addresses (['BE']['lockIPv6'] and ['FE']['lockIPv6'])</p> <p>some changes i managed to trace back:</p> <pre>sysext/core/Classes/Core/Bootstrap.php -> initializeBackendUser() sysext/core/Classes/Authentication/AbstractUserAuthentication.php -> ipLockClause_remoteIPNumber()</pre> <p>since IPv6 becomes more and more popular this becomes more and more of an issue</p>

What is the difference to [#21638](#) in this bug report?
Otherwise I tend to mark this a duplicate.

#2 - 2014-05-16 01:45 - Robotic-Brain no-lastname-given

The other is more of a workaround and targeted at Typo3 4.7,
but I guess you could call this a duplicate...

the problem still is, that you might want different rules for IPv4/IPv6
