#### Description

Is it a normal behavior that data-type-gettext-file is not accessible inside the following structure?

uid:46 is a valid image file.

```
page >
page = PAGE
```

```
page.10 = FILES
page.10 {
    files = 46
```

```
    renderObj = IMAGE
    renderObj.file = GIFBUILDER
    renderObj.file.XY = 400,400
    renderObj.file.10 = IMAGE
    renderObj.file.10.file {
        import.data = file:current:publicUrl
        width = 400c
        height = 400c
    }
}
```

Save publicUrl to a register to access it later works:

```
page.20 = FILES
page.20 {
    files = 46
```

```
    renderObj = COA
    renderObj {
        1 = LOAD_REGISTER
        1.publicUrl.cObject = TEXT
        1.publicUrl.cObject.data = file:current:publicUrl
```

```
    10 = IMAGE
    10 {
        file = GIFBUILDER
        file {
            XY = 400,400
```

```
        10 = IMAGE
        10.file {
            import.data = REGISTER:publicUrl
            width = 400c
            height = 400c
        }
    }
}
```

```
}  
}  
}
```

## History

### #1 - 2014-12-22 15:50 - Alexander Opitz

- Status changed from New to Needs Feedback

Does following help?

```
10 = FILES  
10 {  
    files = 46  
    renderObj = IMAGE  
    renderObj {  
        file.import.data = file:current:publicUrl  
        file.height = 400c  
        file.width = 400c  
    }  
}
```

### #2 - 2014-12-22 16:02 - Michiel Roos

Some times a client wants to apply a mask. For which GIFBUILDER is perfect.

```
stdWrap.cObject = FILES  
stdWrap.cObject {  
    references {  
        table = tt_news  
        uid.data = GP:tx_ttnews|tt_news  
        fieldName = tx_fal_ttnews_fal_images  
    }  
    begin = 0  
    maxItems = 1  
    renderObj = COA  
    renderObj {  
        10 = LOAD_REGISTER  
        10.importUrl.data = file:current:publicUrl  
        20 = IMAGE  
        20 {  
            file = GIFBUILDER  
            file {  
                XY = 300,168  
                transparentColor = #000000  
                backColor = #000000  
            }  
        }  
    }  
}
```

```
20 = IMAGE  
20.file = GIFBUILDER  
20.file {  
    XY = 300,168  
    backColor = #ffffff  
    10 = IMAGE  
    10.file {  
        import.data = register:importUrl  
        import.listNum = 0  
        width = 300c  
        height = 168c  
        offset = 0,0  
    }  
} 20.mask = fileadmin/site/geloven/images/mask-artikel-listview.png  
}  
30 = RESTORE_REGISTER  
}
```

### #3 - 2014-12-22 16:30 - Michiel Roos

This does NOT work:

```

stdWrap.cObject = IMAGE
stdWrap.cObject {
    file = GIFBUILDER
    file {
        XY = 300,168
        transparentColor = #000000
        backColor = #000000
    }
}

```

```

20 = IMAGE
20.file = GIFBUILDER
20.file {
    XY = 300,168
    backColor = #ffffff
    10 = FILES
    10 {
        references {
            table = tt_news
            uid.data = GP:tx_ttnews|tt_news
            fieldName = tx_fal_ttnews_fal_images
        }
    }
}

```

```

begin = 0
maxItems = 1
renderObj = IMAGE
renderObj {
    file {
        import.data = file:current:publicUrl
        import.listNum = 0
        width = 300c
        height = 168c
        offset = 0,0
    }
}
}
}
}

```

```

20.mask = fileadmin/site/geloven/images/mask-artikel-listview.png
}
}
}
}

```

#### #4 - 2015-04-04 13:19 - Christian Hellmuth

I can confirm this. file:current:publicUrl is not accessible from within a GIFBUILDER object in TYPO3 CMS 6.2.11.

#### #5 - 2015-07-06 11:24 - Alexander Opitz

- Priority changed from -- undefined -- to Could have

IMHO there was a fix in 6.2.12 or .13.

can you please retest with latest (6.2.14) and report back if there is still an issue?

#### #6 - 2015-10-27 14:34 - Alexander Opitz

- Status changed from Needs Feedback to Closed

No feedback within the last 90 days => closing this issue.

If you think that this is the wrong decision or experience this issue again, then please write to the mailing list [typo3.teams.bugs](mailto:typo3.teams.bugs) with issue number and an explanation or open a new ticket and add a relation to this ticket number.

#### #7 - 2017-11-21 13:49 - Ben Robinson

I can confirm that this issue still exists in TYPO3 CMS 8.7.8.

#### #8 - 2017-11-21 16:08 - Alexander Opitz

- Status changed from Closed to Needs Feedback

Please provide the TypoScript which have that issues.

#### #9 - 2017-11-21 17:18 - Ben Robinson

This does not work:

```

10 < styles.content.get
10{
  renderObj = FILES
  renderObj{
    references.fieldName = assets
    renderObj = COA
    renderObj {
      10 = LOAD_REGISTER
      10.importUrl.data = file:current:publicUrl
      # "Register" wird wegen Bug https://forge.typo3.org/issues/58705 benötigt
      20 = IMAGE
      20{
        file = GIFBUILDER
        file{
          XY = 100,100
          10 = IMAGE
          10.file.import.data = file:current:publicUrl
          #WORKAROUND: 10.file.import.data = register:importUrl
          20 = IMAGE
          20.file = EXT:user_site/Resources/Public/Images/Mask.png
        }
      }
    }
  }
}

```

With ...

```
10.file.import.data = register:importUrl
```

... it works.

#### #10 - 2017-11-21 17:59 - Alexander Opitz

- Status changed from Needs Feedback to New

Only as a side node:

file:current:publicUrl is IMHO false here, publicUrl is the Url of the FAL media which the browser should call to get the media, but you want that the image should be processed.

So correct would be

```
10.file.import.data = file:current:originalUid
```

or

```
10.file.import.data = file:current:uid
```

Depending if current is a FAL object or a FAL reference.  
But this is independent of the issue here.
