

TYPO3.Flow - Bug #58744

Can not split configuration in settings.yaml

2014-05-13 09:57 - DANIEL Rémy

Description

Hi

I don't know if this is a bug. If not, please close this ticket.

I tried to organize a little my settings.yaml by grouping some parts of the configuration into main entries. But, then I noticed that "excludeClasses" were not anymore taken into account by the reflection service. TYPO3.Flow's sub-entries were totally empty.

```
TYPO3:
  Flow:
    object:
      excludeClasses:
        'gedmo.doctrineextensions': ['.*']
```

```
TYPO3:
  Flow:
    persistence:
      doctrine:
        filters:
          soft-deletable: 'Gedmo\SoftDeletable\FILTER\SoftDeletableFilter'
        eventListeners:
          -
            events: ['onFlush', 'loadClassMetadata']
            listener: 'Gedmo\SoftDeletable\SoftDeletableListener'
```

I think we cannot have, in the same yaml file, multiple occurrences of the same key, isn't it?
