Description
If e.g. a content element gets moved to a different page, the workspace preview link opens the source page (which does not contain the element anymore, because it was moved). Thus, it would be better to use the target page for previewing moved records.

[BUGFIX] Preview of moved workspace elements on source page

If e.g. a content element gets moved to a different page, the
workspace preview link opens the source page (which does not
contain the element anymore, because it was moved).

Since the elements are shown on the correct page in the
workspace backend module, using the target page in the preview
link for the frontend is just obvious.
