Description <ul style="list-style-type: none">• Have a page with pages from 2 tables, for example tt_content-records and news-records.• Open the list-view.• Click heading of news-records to only show records from that table.• Notice you can go back to show all tables (unset the filter) by clicking on the heading.• Delete all news-records. <p>Error: As soon as you delete the last record there is no header anymore you can click to unset the filter. The page just stays empty - without showing there are records from other tables.</p> <p>Workaround: Click the page again in the page-tree. This will show the list-view without a table-filter again.</p> <p>Solution: Maybe redirect to an unfiltered view as soon as there is no record to show but a filter is set.</p>
