

TYPO3 Core - Bug #59562

WebKit may insert a span element when backspacing an heading

2014-06-13 17:30 - Wouter Beeffink

Description

When removing a block format (h2, p) from an element in the RTE, the following element (for example the next paragraph) gets an inline span and inline CSS. That shouldn't happen.

To reproduce you can do the following:

1. Create a content element (for example "text").
2. Add a header with some text.
3. Add a paragraph with some text after the header.
4. Clear the header using the backspace key.
5. Delete the empty line left by the header using the delete key.
6. The paragraph is now bold and contains a span with inline CSS.

Because this is quite specific I also attached an animated gif that hopefully shows this issue in a way that's easier to understand.

I can reproduce this issue in TYPO3 6.1.7 and 6.2.2. I also seem to be able to reproduce this issue using any sort of block format.

Associated revisions

Revision 87c780ae - 2015-01-17 05:41 - Stanislas Rolland

[BUGFIX] RTE: WebKit may insert a span tag when backspacing a heading

It may happen, for example, when deleting an empty heading which is followed by a paragraph, or when backspacing a paragraph or heading which becomes merged with a preceding heading.

Remove the unwanted span element.

Releases: master, 6.2

Resolves: #59562

In what browser do you get this behaviour?

I am unable to reproduce this with Firefox 32.0.3.

Also unable to reproduce with Google Chrome 38.0.2125.101.

In what browser do you get this behaviour?

#4 - 2015-01-16 01:52 - Stanislas Rolland

I was able to reproduce this behaviour with Google Chrome 39.0.2171.99.

However, the header is not deleted. The contents of the paragraph rather become integrated into the header.
