Description			
Hi,			
Currently i am working with Solr search in typo3 6.2. I successfully configured solr and indexing of custom database tables is working perfect but now I want to also index pdf file content attached with database records so I configured "solrfal" extension for file indexing.			
when i try to do file indexing using solrfal and If record with a field of type "group", internal_type "file" than			
<code>"\$fileUids = \$this->getFileAttachmentResolver()->detectFilesInField(\$tableName, \$fieldName, \$record);"</code>			
this line return empty array in (ext/solrfal/Classes/Service/FileAttachmentResolver.php) file.			
Also in debug i come to know that in (ext/solrfal/Classes/Service/FileAttachmentResolver.php) file at detectFilesInField function i got my \$fieldConfiguration['internal_type'] is "file" and that is not handled by your extension. You can review this in attached screenshots.			
I Installed Following extension :			
1) Apache Solr for TYPO3 - Enterprise Search (3.0.0-dev)			
2) Apache Solr for TYPO3 - File Indexing(2.0.0)			
3) Apache Tika for TYPO3 - (1.3.0)			
Currently I stuck here because of this single issue.			
Help is appreciated			
Thanks, Raju Makwana
