Static Info Tables - Feature #59896

TCA Selection of countries with different key

Description

Hi Stanislas,

in the current version of static_info_tables, it's only possible to generate a selection with UID as key.

E.G. for languages:

```
'foreign_table' => 'static_languages',
'foreign_table_where' => ' AND lg_iso_2 IN ("DE","FR")',
'itemsProcFunc' => 'SJBR\\StaticInfoTables\\Hook\\Backend\\Form\\ElementRenderingHelper->translate
LanguagesSelector',
```

In older versions of static_info_tables we could also set another key with an additional configuration (see indexField):

```
itemsProcFunc_config' => array (
    'table' => 'static_languages',
    'where' => ' AND lg_iso_2 IN ("DE","FR")',
    'indexField' => 'lg_iso_2',
    'eval' => 'required',
),
```

Is it possible to get this configuration for the current version?

Cheers, Alex

History

#1 - 2014-07-11 21:55 - Andreas Dörler

Hi,

it would be great to have the indexfield configurable.

E.g. in older versions one could easily generate a country_zone selector box which depends on the previously selected country (indexfield = cn_iso_3), by simply doing something like this:

```
                'itemsProcFunc' => 'tx_staticinfotables_div->selectItemsTCA',
                'itemsProcFunc_config' => array (
                    'table' => 'static_country_zones',
                    'indexField' => 'zn_code',
                    'prependHotlist' => 0,
                    'where' => " AND zn_country_iso_3 = '###REC_FIELD_country###'",
                ),
```

Now if the uid is stored into country field you'll have to create an additional MM table.

Kind regards
Andreas

If REC_FIELD_country contains the uid of a country, you can still use such markers in the foreign_table_where property of the select field. See http://docs.typo3.org/typo3cms/TCAReference/Reference/Columns/Select/Index.html#foreign-table-where

'foreign_table_where' => " AND zn_country_uid = '###REC_FIELD_country###'",

#3 - 2014-09-23 07:26 - Stanislas Rolland

Will add the possibility to specify, for example:

```
'itemsProcFunc' => 'SJBR\\StaticInfoTables\\Hook\\Backend\\Form\\ElementRenderingHelper->translateLanguagesSel
ector',
'itemsProcFunc_config' => array (
    'indexField' => 'lg_iso_2,lg_country_iso_2',
),
```
