

Testing - Feature #6

Tests have different results with different file systems

Description

On most systems (my Mac at least ;-) all tests are executed in an alphabetical order as the SPL DirectoryIterator returns the package directories and testcase filenames sorted. However, on some systems this is not the case and although that shouldn't happen, the test lead to different results because some undetected dependencies between single tests exist.

As that is a bad thing generally, we should always run the single tests in a random order to detect dependency as early as possible.

History

#1 - 2007-02-19 13:06 - Robert Lemke

- Status changed from New to Closed
- Sprint set to fixed

#2 - 2008-07-01 17:24 - Robert Lemke

- Target version deleted (1)
