<b>Description</b>			
Hello...I just try to learn Fluid, but when I want to save some values following error appears:			
#1251730702: The value must be of type "Tx_Sffluid_Domain_Model_Customer", but was of type "array".			
edit.html:			
<pre>&lt;p class="bodytext"&gt;Editieren Sie den Kunden:&lt;/p&gt; &lt;f:form method="post" action="update" name="customer" object="{customer}"&gt; &lt;label for="firstname"&gt;Vorname&lt;/label&gt;&lt;br /&gt; &lt;f:form.textbox property="firstname" /&gt;&lt;br /&gt; &lt;label for="lastname"&gt;Nachname&lt;/label&gt;&lt;br /&gt; &lt;f:form.textbox property="lastname" /&gt;&lt;br /&gt; &lt;f:form.submit class="submit" value="Submit"/&gt; &lt;/f:form&gt;</pre>			
CustomerController.php:			
<pre>&lt;?php class Tx_Sffluid_Controller_CustomerController extends Tx_Extbase_MVC_Controller_ActionController { protected \$customerRepository;  public function initializeAction() {     \$this-&gt;customerRepository= t3lib_div::makeInstance('Tx_Sffluid_Domain_Repository_CustomerRepository'); } public function indexAction() {     \$this-&gt;view-&gt;assign('zahl', 12);     \$this-&gt;view-&gt;assign('customers', \$this-&gt;customerRepository-&gt;findAll()); } public function editAction(Tx_Sffluid_Domain_Model_Customer \$customer) {     \$this-&gt;view-&gt;assign('customer', \$customer); } public function updateAction(Tx_Sffluid_Domain_Model_Customer \$customer) {     \$this-&gt;customerRepository-&gt;update(\$customer);     \$this-&gt;flashMessages-&gt;add('Der Kunde wurde aktualisiert.');</pre>			
I can't find an error. The code is nearly the same as in blog_example. What's wrong here?!

- % Done changed from 0 to 100

I found it: Without comments FLOW3 don't converts the array to an object.  
For every variable in model-file you have to add an comment like this:

```
/** * The customer's first name. * * @var string  
*/
```
