Description

If the following file structure is present:

```
Resources/Private/Partials/Foo.html  
Resources/Private/Partials/Foo/Bar.html
```

The partial Foo can not be rendered, because the search order for the partial is:

```
$paths = array(  
    'Resources/Private/Partials/@partial',  
    'Resources/Private/Partials/@partial.html'  
);
```

And the function `file_exists` checks if the partial exists and the folder is the first one checked and returns true, so Fluid generates an empty rendered partial.

In TYPO3 CMS `fluid/Classes/View/TemplateView.php:473`

This relates to #39868
