Description			
Hello,			
When extending the TCA of News with:			
...			
<pre>\$GLOBALS['TCA']['tx_legamaster_domain_model_news']['columns']['categories']['external'] = array(0 => array('base' => array('xpath' => './self::*[@language="en"]/category', 'mapping' => array('table' => 'sys_category', 'reference_field' => 'uid', 'multipleValuesSeparator' => ','))); ... </pre>			
...and with the XML like this:			
<pre><category>2,3,7</category></pre>			
...the first and last element of the string are not imported.			
...I had to use:			
<pre><category>;2,3,7,</category></pre>			
Regards, Bert

Hello,

This issue was due to in incorrect mapping in the control section, can be ignored, feature works as expected AFAICS...

Example:

```
/* categories */
$GLOBALS['TCA']['tx_news_domain_model_news']['columns']['categories']['external'] = array(
    0 => array(
        'field' => 'filter_ids',
        'mapping' => array(
            'table' => 'sys_category',
            'reference_field' => 'uid',
            'multipleValuesSeparator' => ','
        )
    )
);
```

...with <filter_ids>3,6,11,77</filter_ids>

Thanks and regards,

Bert
