TYPO3 Core - Feature #61308
Allow placeholder attribute

Description
The extension tx_form should allow using the placeholder attribute. This was at some point discussed here #32594 (but at the wrong place). I'd really love to see this happening - at least on TS base and later on in the wizzard.

Example:

lib.contactForm = FORM_INT
lib.contactForm {
  ...
  10 = TEXTLINE
  10 {
    name = name
    label.value = Name
    placeholder = Please enter your name.
  }
  ...
}

Maybe a chance to make a contribution and implement this feature?

2020-02-22
Okay Markus. We check the code and try to find a good solution ;)

Status changed from New to Under Review

Patch set 1 for branch master of project Packages/TYPO3.CMS has been pushed to the review server. It is available at http://review.typo3.org/32699

IMHO the placeholder attribute should support stdWrap. To do something like the following.

```plaintext
lib.contactForm = FORM_INT
lib.contactForm {
  ...
  10 = TEXTLINE
  10 {
    name = name
    label.value.lang.es = Foo
    placeholder.value.lang.es = Bar
  }
  ...
}
```

I've checked the documentation and seen that the label tag is the only element which can be of type cObject. Maybe we should adapt the functionality of this element.

Tested it and works like a charm. This should also be possible for FORM objects of type TEXTAREA.
