Description

Hi there

The sysexst frontend does not check that "<link file:"-links actually contain a numeric value (when parsing RTE output) and just forces it to be a FAL-link automatically.

If one uses the possibility of "file:\\netmount\foo\bar.doc" links, the rendered bodytext just contains the text, as there was no FAL-record (uid = 0) found.

Attached patch solves at least the frontend output.

Cheers

History

#1 - 2014-12-03 09:30 - Tizian Schmidlin

Actually, is_int is too aggressive and since \$linkHandlerValue is a string it will never match. Use this instead:

```
if ($linkHandlerKeyword === 'file' && \TYPO3\CMS\Core\Utility\MathUtility::canBeInterpretedAsInteger($linkHandlerValue)) {
```

- Status changed from New to Needs Feedback

- Assignee set to Nils Blattner

Could you tell us if this could be closed? Thank you

#3 - 2015-05-06 13:33 - Nils Blattner

Should be OK in the latest 6.2.

Cheers
