The core has multiple places where country flags are stored.

1. typo3/gfx/flags/ - a set of non-normalized .gif files created by Robert back in the days. No reference currently in the usage inside the core since 4.5.

2. t3skin contains png files of a lot more flags. They are used for selecting a flag in sys_language records.

3. t3skin also delivers a sprite file with all png icons. This is used for e.g. the list view of sys_language records.

So, the core delivers flags (old ones, just a few, as gif, not inside EXT:core) but they are not in use since TYPO3 4.4. Also it does not deliver sprites, however, uses the sprites (flags-multiple etc) in list view.

t3skin delivers a standard-set which should be part of EXT:core, included in the right place from the beginning so no dynamic TCA manipulation is necessary in ext_tables.php.

Thus, the core delivers flags (old ones, just a few) as gif, not inside EXT:core but they are not in use since TYPO3 4.4. Also it does not deliver sprites, however, uses the sprites (flags-multiple etc) in list view.

few, as gif, not inside EXT:core) but they are not in use since TYPO3 4.4. Also it does not deliver sprites, however, uses the sprites (flags-multiple etc) in list view already.

t3skin delivers a standard-set which should be part of EXT:core, included in the right place from the beginning so no dynamic TCA manipulation is necessary in ext_tables.php.

Overriding of any styles, icons and sprites is still possible.
