Description

Use composer class loader for better performance

Require composer class loader early in the bootstrap gives us many benefits:

1. Very early classes can be found and loaded very early in the bootstrap
2. Get rid of complexity for default cases
3. Test classes will only loadable in testing context
4. Cache warmup will be much faster as much less files need to be written

Revision 89f9ec40 - 2015-03-14 20:46 - Helmut Hummel

[BUGFIX] Resolve class name from aliases managed by composer

The old class loader has API to return the original class name when given an alias. This API was not respected when implementing composer class loading with #64361 with the result that it was broken for all classes and aliases managed by the composer class loader.

To address this issue, the composer class loader is now injected into the old class alias map, so that it can resolve class names from aliases managed by it.
